*High pressure cleaner*

**junior**  
**140 bar**

*Operating instructions*  
*Read and confirm before use*

## Description

### Dear Customer

We would like to congratulate you on your new high pressure cleaner and to thank you for the purchase.

To ease your introduction to the use of the cleaner, we have provided the following pages of explanations, tips and hints.

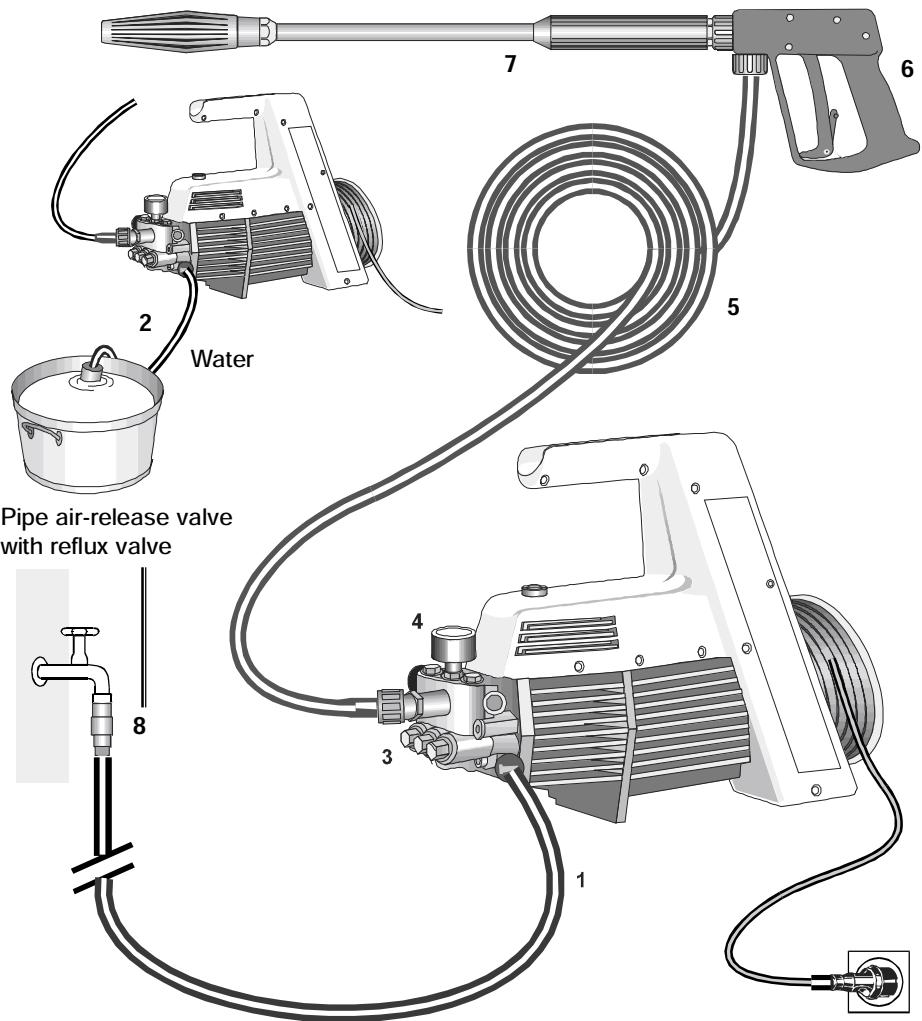

The equipment will assist you professionally in all cleaning tasks, e.g.:

- |              |                         |                 |
|--------------|-------------------------|-----------------|
| - facades    | - vehicles of all types | - barrels and   |
| - flagstones | - sheds                 | containers      |
| - terraces   | - channels              | - machines etc. |

Technical specifications		Kräntze junior 140 bar
operating pressure		140 bar
permissible overpressure		155 bar
water output		8 l/min at 2840 rpm
hot water input		max. 60 °C
electrical ratings		230 V ; 50 Hz ; 10,5 A
connected wattage	input: output:	2,3 kW 1,65 kW
fuse protection		16 A (slow fuse)
weight		17,5 kg packing excluded 20 kg packing included
dimensions		length 550 mm width 230 mm height 380 mm
sound level accord. to DIN 45 635 with dirtkiller		87 dB 88 dB
recoil at lance		approx. 19 Nm
torque		20 Nm (assumed length at lance: 0,9 m)

Permissible tolerance for figures ± 5 % in accordance with  
VDMA uniform sheet 24411

## Description

### Construction

The Kränzle junior 140 bar high pressure cleaner is a portable machine.  
The design can be seen from the diagram.

### Item

- |  |   |
|--|---|
| 1. Water inlet connection with a filter            | 5. High pressure hose   |
| 2. Suction hose with filter<br>(special accessory) | 6. Spray gun assembly   |
| 3. High pressure pump                              | 7. Interchangeable lance with Vario-Jet nozzle  |
| 4. Pressure gauge                                  | 8. Pipe air-release valve with reflux valve<br>Special accessory (Order no. 41.016 4) |

## Description

### Water and Cleaning System

Water can be connected at mains pressure to the high pressure pump or it can be sucked directly from a storage tank. The water is then forced under pressure by the high pressure pump to the lance.

The high pressure jet is formed by the nozzle at the end of the lance.

Environmental, refuse disposal and water protection regulations must be observed !

### Lance with trigger gun

The machine can be operated when the safety trigger is squeezed.

When the lever is squeezed, the spray gun opens. The liquid is then pumped to the nozzle. The spray pressure increases and quickly reaches the selected operating pressure.

When the trigger is released, the trigger gun closes and any further spraying of liquid from the lance is stopped.

The increase in pressure when the trigger gun is closed causes the unloader valve - safety valve closes and the pump resumes pressure spraying from the lance.

The trigger gun is a safety device. Repairs should only be performed by qualified persons. Should replacement parts be required, use only components authorized by the manufacturer.

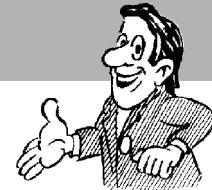

### Unloader valve - safety valve

The unloader valve - safety valve protects the machine from a build-up of excess-pressure, and is designed not to permit an excess pressure to be selected for operation. The limit nut of the unloader valve is sealed with a spray coating.

Replacements, repairs, new adjustments and sealing should only be performed by qualified persons !

## Description

### *Motor protection switch*

*The motor is protected from overload by a motor protection switch, which automatically cuts out the motor in the event of overload.*

*However, should the switch trip frequently, the cause of the malfunction should be located and rectified (see page 6).*

*Replacements and inspection work should only be performed by qualified persons when the machine is disconnected from the power supply, i.e. pull the plug from the electrical socket before such work is carried out.*

### Setting up

#### *Location*

*Neither set up and operate the machine in rooms where there is a risk of fire or explosion nor put it into puddles.*

*Do not use the machine under water.*

#### CAUTION !

*Never use liquid containing solvents such as paint thinners, petrol, oil or similar liquid matter.*

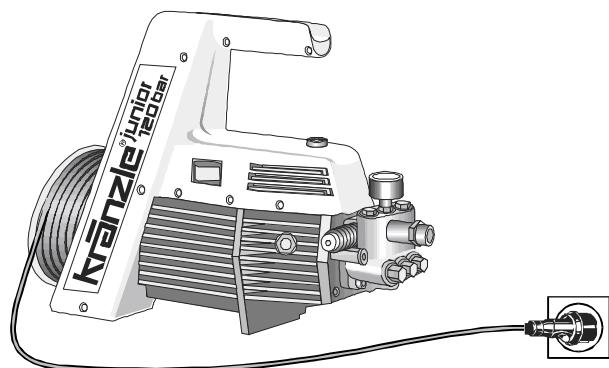

*Pay attention to the instructions of the manufacturer of the cleaning agents. The seals in the machine are not resistant to solvents. The spray of solvents is inflammable, explosive and poisonous.*

#### CAUTION !

*When running your high pressure cleaner with hot water of 60 °C raised temperatures occur.*

*Do not touch the machine without safety gloves.*

## Description

### Electrical connection

The machine is supplied with an electrical power cord with plug.

*The mains plug must be fitted to a standard grounded socket with a 30 mA residual current operated device. The socket must be protected with a 16 A slow fuse on the mains inside.*

*KRÄNZLE junior 140 bar - 230 Volt 50 Hz*

*When using an extension cable, this must have an earthed lead which is properly connected to the socket. The conductors in the extension cable must have a minimum cross section of 1,5 mm<sup>2</sup>. Plug connections must be of a spray proof design, and may not be located on a wet floor.*

*(With extension cables of more than 10 m the conductor must have cross section of at least 2,5 mm<sup>2</sup>.)*

### CAUTION !

The use of extension cables which are too long may lead to malfunctions and start-up difficulty.

When using a cable drum, always keep the cable wound as far as possible.

## Description

Brief operating instructions  
are fitted to the machine (numbers 1 - 6)

1. Connect the high pressure hose with spray gun and machine.
2. Connect the suitable water supply.
3. Flush the air from the pump (open and close the spray gun several times).
4. Make the electrical connection (230 Volt AC).
5. Switch on the machine while the spray gun is open and commence cleaning.
6. After completing the work, completely empty the pump. (switch the motor on for approx. 20 sec. without the suction and pressure hoses).  
- Only use clean water ! Protect from frost !

### CAUTION !

Please pay attention to the regulations of your waterworks company.

In accordance with DIN 1988, the machine may not be directly connected to the public drinking water supply lines.

A brief connection however is permissible according to DVGW (German Association for Gas and Water Affairs) if a tube ventilator with reflux valve (Kränzle Order-No. 41.016 4) is built into the water supply.

Also indirect connection to the public drinking water supply lines is permissible by way of free emission in accordance with DIN 1988, part 4; e.g. by using a reservoir with a float valve.

Direct connection to a non-drinking water supply line is permissible.

### High pressure hose and spray device

The high pressure hose and spraying device supplied with the machine are made of high grade material, they are also optimized for the machine and marked as required by appropriate regulations.

*If replacement parts are required, only such parts that are authorized by the manufacturer and which bear the markings required by appropriate regulations may be used. The high pressure hose and spray device must be connected in a pressure-tight manner. The high pressure hose may not be driven over, pulled excessively, or twisted. The hose may under no circumstances be pulled over sharp edges, since otherwise the guarantee is automatically void.*

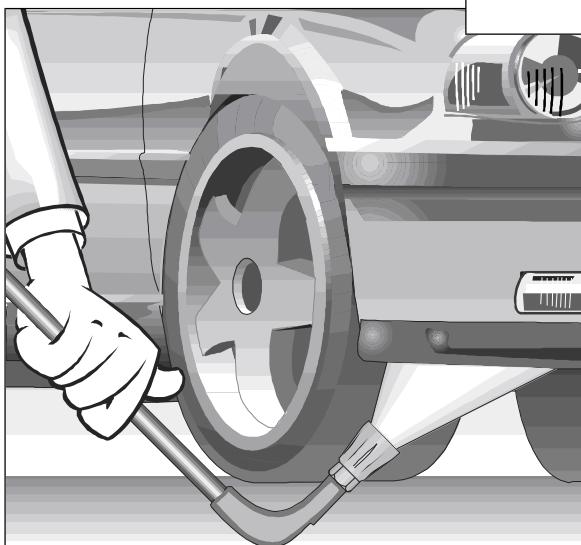

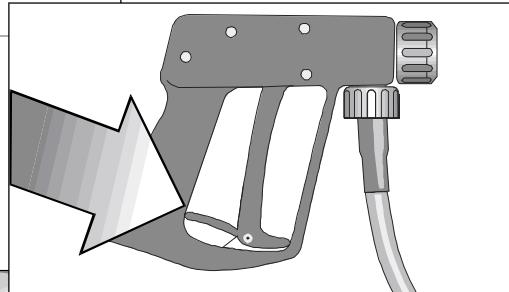

## *Savety notes*

The recoil is less than 20 Nm.

Apply the safety catch on the spray gun after each use, in order to prevent unintentional spraying.

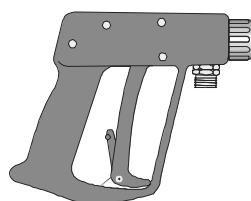

Always aim the underbody lance. Note, when using an angled underbody lance, like for example lance No. 41.075, that there is a certain amount of torque (twisting motion) in the recoil. (See also notice on page 2).

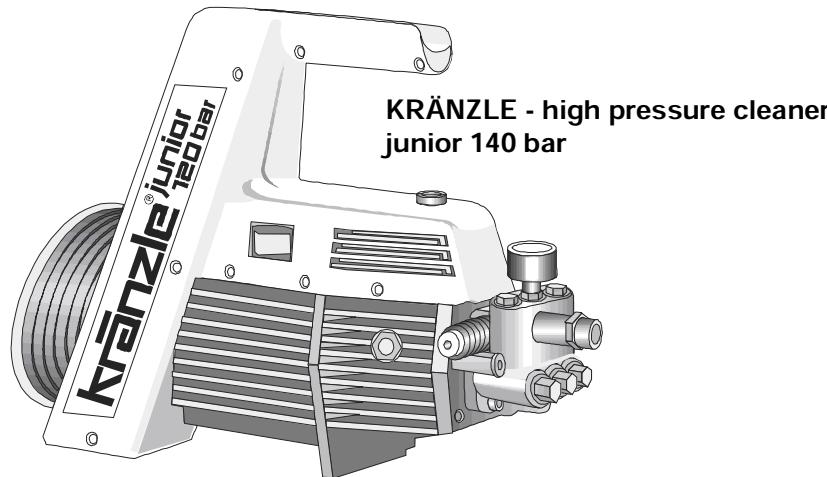

*This is what you've purchased:*

Spray lance with Vario-Jet high pressure nozzle,  
adjustable from flat spray to point spray

Spray gun with screw connection

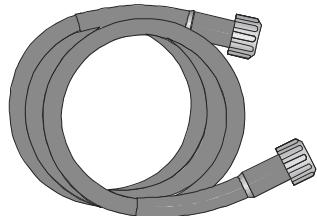

KRÄNZLE - high pressure cleaner  
junior 140 bar

Operating instructions

High pressure hose, 8 m

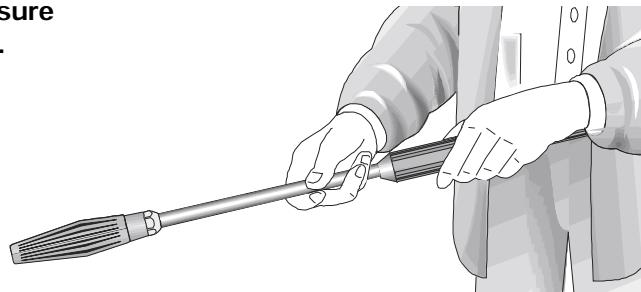

Water inlet components  
(filter already installed)

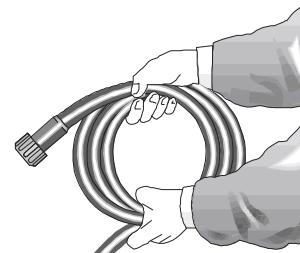

## *Preparation for use*

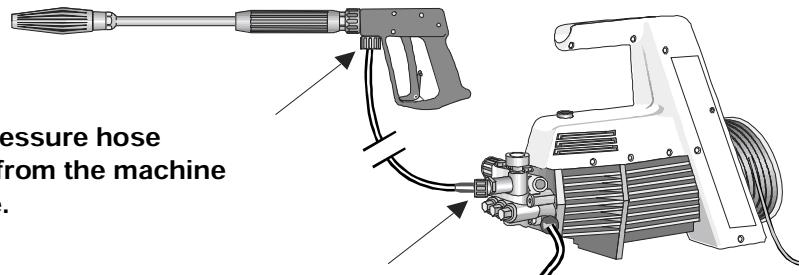

**Connect the high pressure lance to the spray gun.**

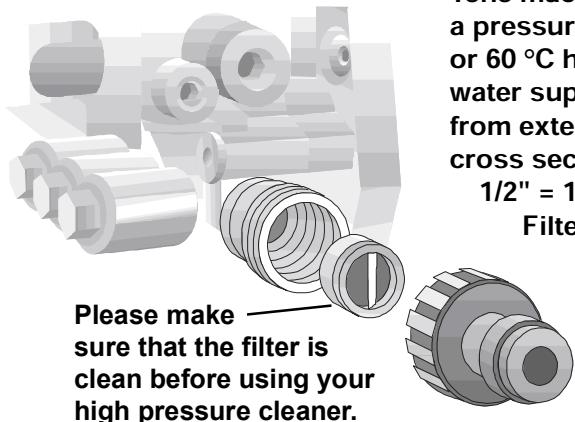

**Unwind the high pressure hose without leaving kinks or "nooses" and connect it to the spray gun and pump. When using extention hoses, use max. 20 m high pressure hose, or 2x 8 m with hose connectors.**

**The high pressure hose connected from the machine to the lance.**

## *Preparation for use*

Please make  
sure that the filter is  
clean before using your  
high pressure cleaner.

The machine can be connected to a pressurised water line with cold or 60 °C hot water. Ensure that the water supply is clean when sucking from external sources. The hose cross section must be at least 1/2" = 12.7 mm (free passage). Filter 1 must always be clean.

### CAUTION !

*When running your high pressure cleaner with hot water of 60 °C raised temperatures occur.  
Do not touch the machine without safety gloves.*

Maximum suction height 1 m.

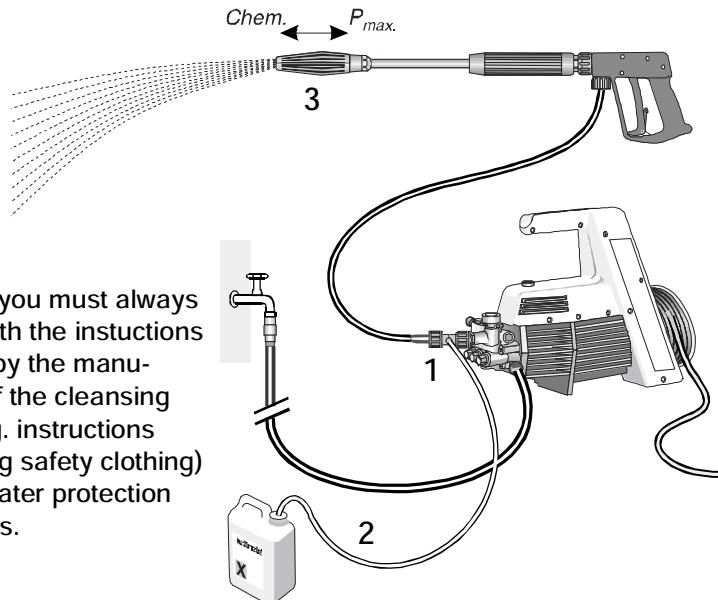

## *Preparation for use*

### **When using cleansing agents:**

For this machine a screwed-in injector no. 1 for inducting cleansing-agents is available as special accessories.  
(Screwed-in injector order no. 13.376 2).

Place chemical filter no. 2 in the reservoir with the cleansing agent. Push Vario-Jet no. 3 to front position to enable the injector to induct the cleansing agent. By sliding back the Vario-Jet nozzle, the supply of chemical is automatically cut off. Allow the cleansing agent to take effect and then remove with high pressure spray.

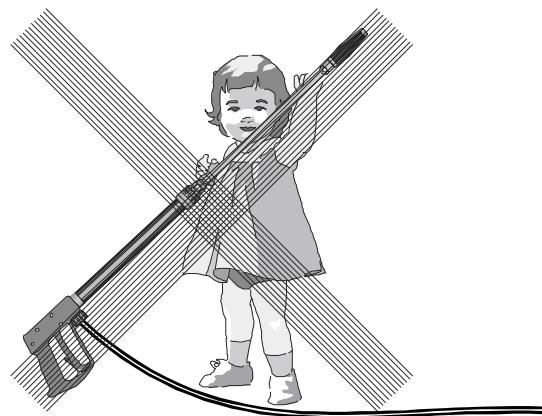

Note that you must always comply with the instructions provided by the manufacturer of the cleansing agent (e.g. instructions concerning safety clothing) and the water protection regulations.

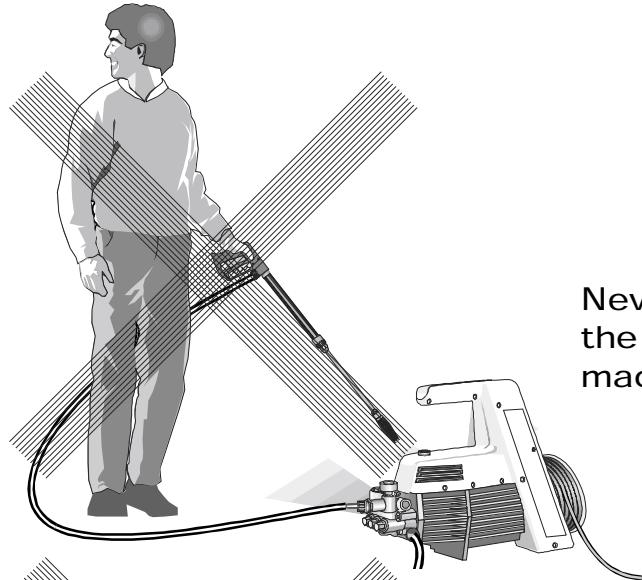

### **To shut down the pump:**

- 1. Switch off the machine.**
- 2. Cut off the water supply.**
- 3. Open the spray gun briefly until the pressure is released.**
- 4. Apply the safety catch on the spray gun.**
- 5. Remove the water hose and high pressure hose.**
- 6. Drain the pump: switch on the motor for approx 20 sec. .**
- 7. Pull the plug from the socket.**
- 8. Winter: store the pump in rooms above 0 °C.**
- 9. Clean the water filter.**

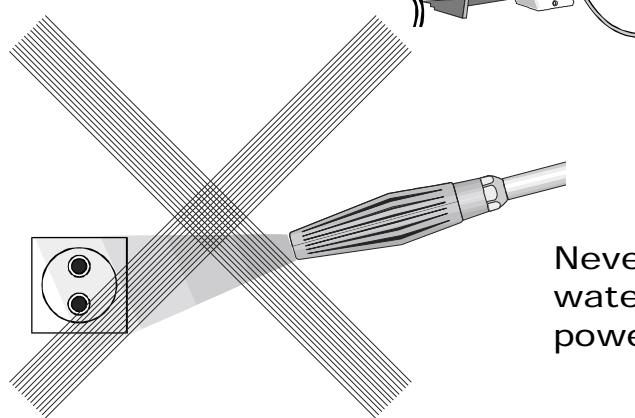

*This is prohibited !*

Never allow children  
to use the  
high pressure cleaner !

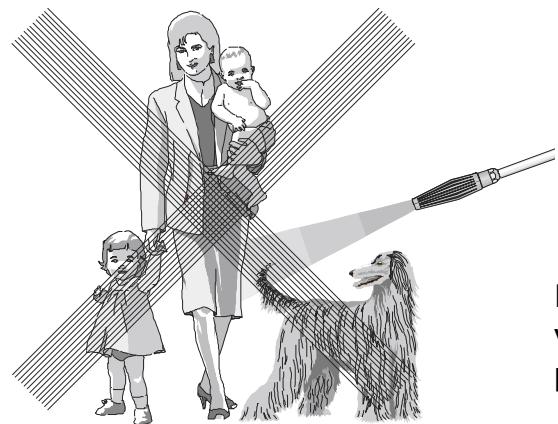

Never direct  
the water jet at the  
machine itself !

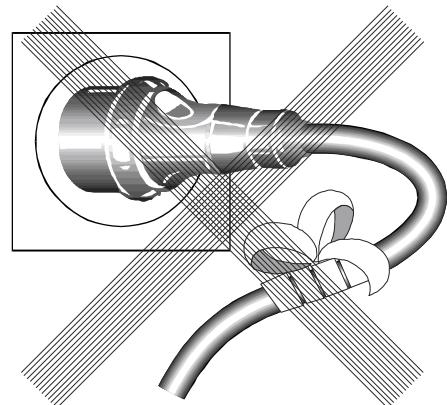

Never direct the  
water jet at a  
power socket !

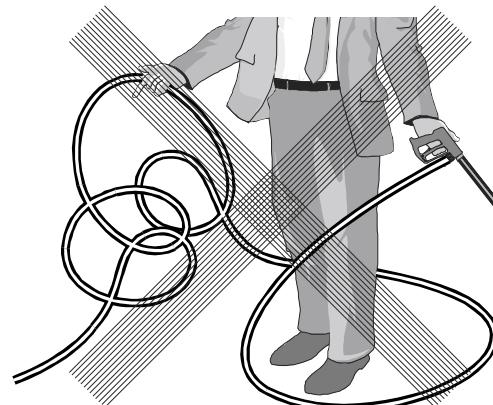

*This is prohibited !*

Never direct the  
water jet at  
people or animals !

Do not damage  
the power cord  
or repair it  
incorrectly !

Never pull the high  
pressure hose if it has  
formed kinks or "nooses" !  
Never pull the hose  
over sharp edges !

## *General rules*

### **Inspections:**

The machine must be inspected according to the "Guidelines for Liquid Spray Devices" at least once every 12 months by a qualified person, to ensure that continued safe operation is guaranteed. The results of the inspection are to be recorded in writing. This may be done in any form.

### **Accident prevention**

The machine is designed for accidents to be impossible if used correctly. The operator is to be notified of the risk of injury from hot machine parts and the high pressure water jet. The "Guidelines for Liquid Spray Devices" must be complied with. (See page 13 + 14)

Please pay attention to the regulations of your waterworks company.  
(Reflux valve with tube ventilation according to DIN 1988)

**Check the oil level at the oil sight glass prior to each use.  
(Ensure horizontal position !)**

#### **Oil change:**

No oil change is required during the working life of the machine. We would suggest though to change the oil after having used the high pressure cleaner for a longer period of time to ensure its longevity. Should it be necessary to change the oil the oil sight glass is to be opened over a reservoir and the machine to be emptied. The oil is to be caught in the reservoir and disposed of in the approved manner.

New oil: 0,25 l - Motor oil W 15/40

### **Guarantee**

The guarantee period is 24 months according to VDMA. (except for wearing parts.)

The guarantee is void if changes are made to the safety devices or if the machine is used at excess temperatures or speeds. The guarantee is also void if the machine is used with a voltage below the required rating, with less than the required amount of water, with dirty water and **external** damage to the pressure gauge, nozzle, pressure hose and spray device.

Wearing parts are: hoses, spraying devices, nozzles, pressure gauges, packings, valves and gaskets.

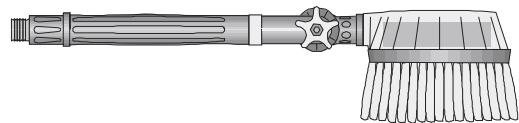

Our operating instructions must be complied with.

## *Additional KRÄNZLE-accessories*

**Rotary scrubbing brush**

Order No. 41.050 1

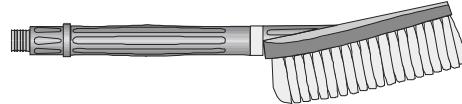

**Underbody lance**

Order No. 41.075

**Flat brush**

Order No. 41.073

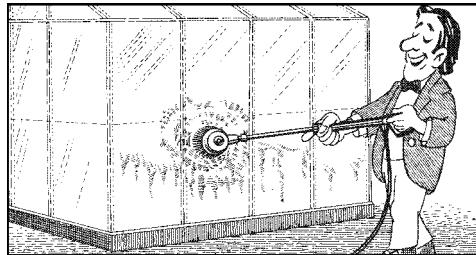

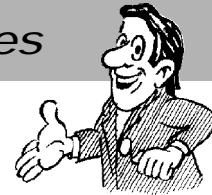

**Dirtkiller**

Order No. 43.094

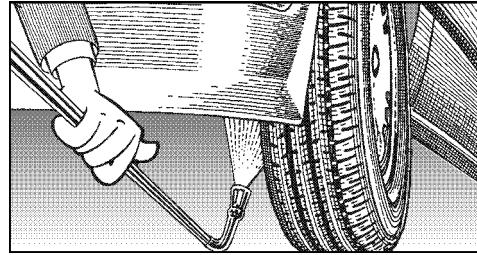

**Environmental, refuse disposal water  
protection regulations must be observed  
when using the accessories.**

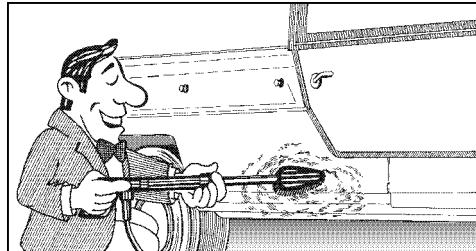

*for further combination possibilities*

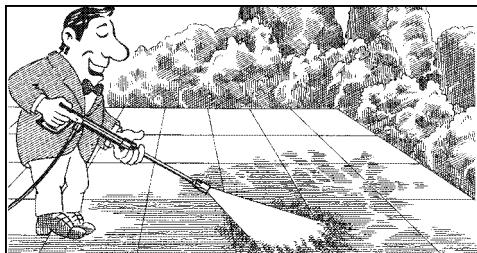

Car cleaning, glass, caravan, boat etc.:  
rotary washing brush with 40 cm extension  
and  
ST 30 nipple M 22

Underbody cleaning of cars, trailers and  
equipment: lance 90 cm with high pressure  
nozzle and ST 30 nipple. The lance must be  
aimed when spraying.

Cleaning cars and all smooth surfaces: brush  
with ST 30 nipple M 22.

Rotary point sprayer for extreme soiling: dirt  
killer with 40 cm extension and  
ST 30 nipple M 22.

## *Small repairs -*

### **The nozzle is blocked !**

- No water but the gauge shows full pressure.

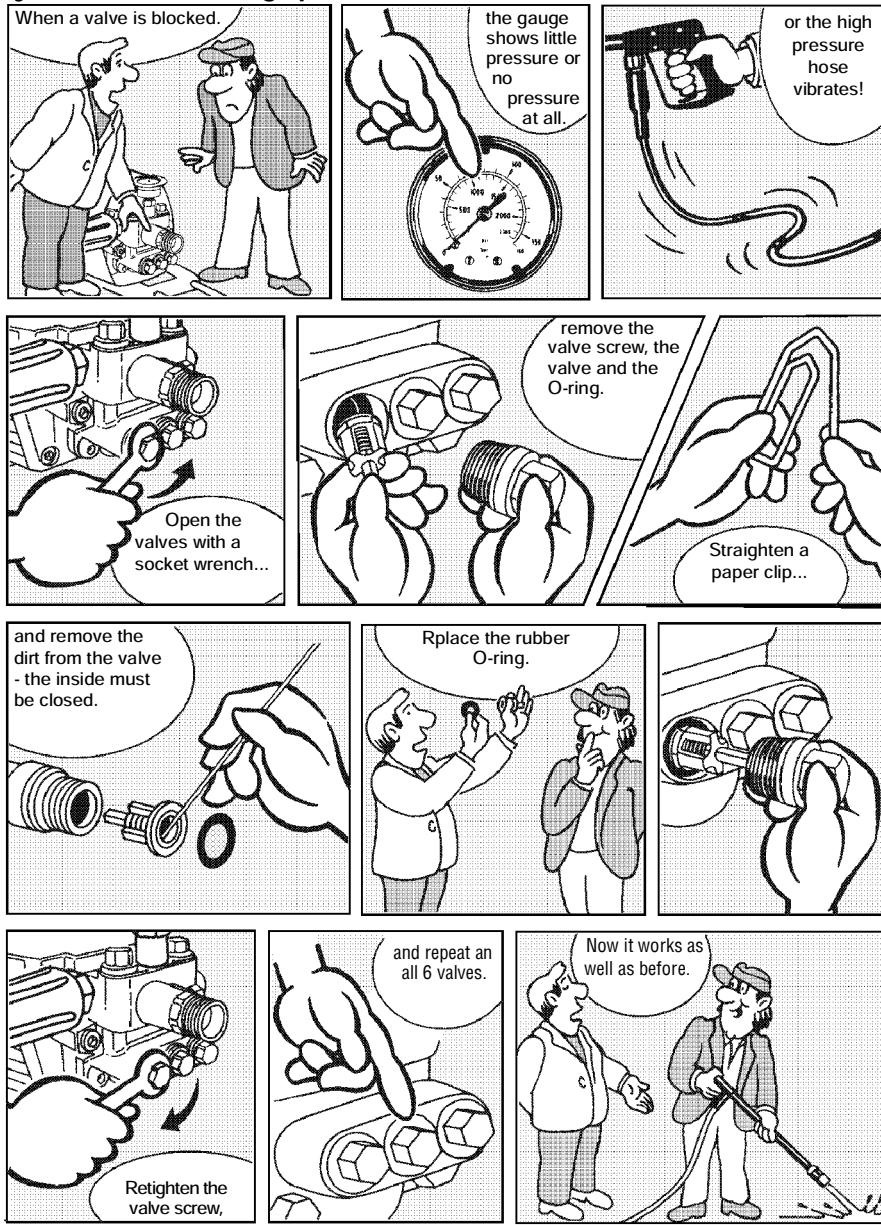

*- do it yourself !*

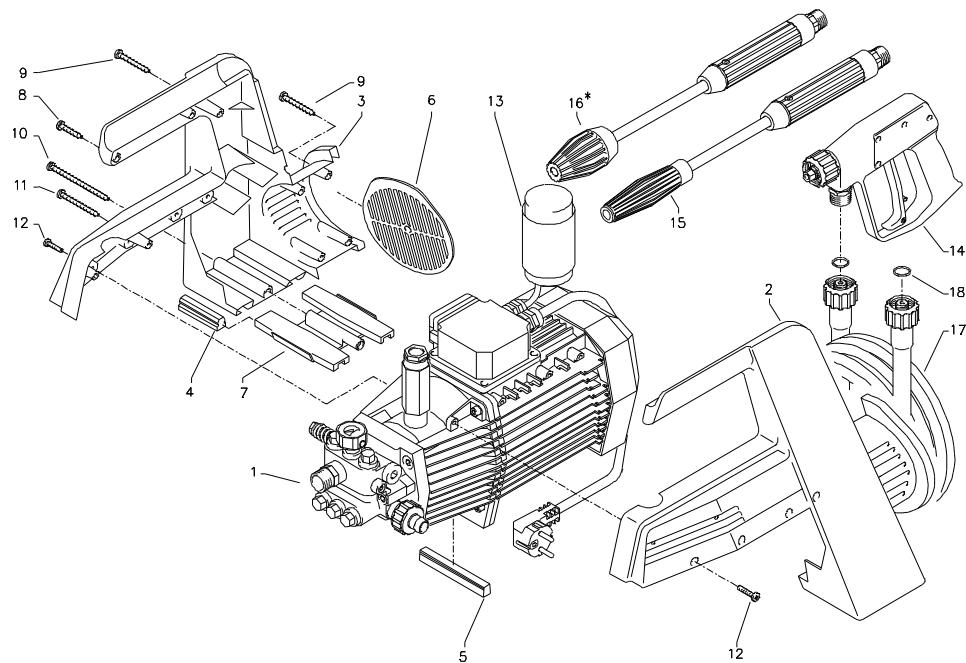

## A Valve dirty or sticky !

- Pressure gauge does not show full pressure.
- Water comes out in spurts.
- If you do not use the high pressure cleaner for some time the valves can stick.
